

What do we do?

REACH365 is an affordable online communications platform for analysing REACH compliance up and down the supply chain. Unlike software applications which can be very expensive and time consuming to manage, REACH365 is a service provided by our data gathering experts at Ethos Solution who specialise in hazardous chemical and substance data acquisition. In short - we do the work so you don't have to.

Our streamlined approach reduces the work required by you and suppliers in compiling the necessary data you need. It is estimated that IT systems worth up to 10 million Euros will be required to manage effective REACH compliance. Our online applications and service are here to ensure you don't have to pay for such applications because they are provided free with our services.

By using REACH365 you will be able to produce streamlined hierarchical reports that allow you to view your supply chain and immediately recognise areas of risk to your supply. Our recommendations based on our reports allow you to focus your attention on the main areas of concern and to reduce the overall costs of preparation.

REACH365 ensures you have a clear and defined road map for protecting the future of your business and delivers the necessary quality control of your supply chain.

How much does it cost? (typical example for Phase 1)

You have 100 substances and direct material supplies (items). For each of these we:

- 1) Email your supplier requesting a breakdown of the ingredients /substances;
- 2) Ask your supplier how they are dealing with REACH for each ingredient / substance and offer our support;
- 3) Collect a Safety Data Sheet for all ingredients and substances from the suppliers of your supplier that are used in the production process;
- 4) Enter all the substances used and REACH pre-registration information from your suppliers into REACH365 along with all Safety Data Sheets;
- 5) Provide a Direct Supplier (Level 1) REACH report with recommendations;

Estimated cost per item is £26.97 * 100 items = £2,697 + VAT

Estimate assumes an average of 3 substances per item. Costs may vary.
